

# *Chameleon Theme*

Read, try and suggested

## Abstract

*Chameleon Theme is open source platform, based on Bootstrap 4, for development child themes, plugins and designs. This platform is adapted to everyone, and with Chameleon platform, all user will be satisfied - developers, designer, support and end users.*

## What is interested here?

The Chameleon platform gives users all infrastructure and compatibility with WP core. This means that you can use Chameleon theme like starting them for developing your themes with all necessary functionality for content organization within the administration, and all you need to do is to develop elements inside your themes.

Also, the Chameleon platform gives designers possibilities to design their own themes with all the features which they need.

With Chameleon platform you will able to get complete start code for widget develops.

Because of that that them have own page builder based on a widget, it provide a new experience of the content organization.

This theme is compatible with WooCommerce, bbPress, BuddyPress, Visual Composer, Contact Form 7 and all other free and commercial plugins.

## The idea of the project

Our idea is to gather all WP plugin and themes users, and here we provide the best theme solution which gives developers, designers and support (they will get an adequate fee for it). All developers, designers and support which will be part of Chameleon platform, will be able to sell their widgets on market.

***It is in the common interest that our ultimate client is satisfied.***

# Problem and solution when develop and using WP themes

## Problems which we see:

For example: You create a lot of sites at WP platform, and then you must use different themes which are in line with clients requirements. The problem starts with time, and this problem slow down maintenance and upgrade of theme. Here you become a position where you must develop child theme for all this theme, and lose your time.

Next problem can be including a new developer in the team because you have to invest in big-power to include it in each of the themes which you use for your client. Can be easier?

Also, here can be a problem with documentation. Imagine that you need to prepare different documentation for all clients (for example 50 different documentation).

Everything of this can be much easier.

## Here is simple solution:

Use Chameleon platform because with it you will be able to create a lot of flexible themes without any limitations, and at the other side you keep its organization of content regardless of which project you are.

Also, with Chameleon platform, it's much easy to send documentation to the clients because it's almost the same everywhere.

## Problems which we see:

For example: You have a client who decides, after some time, to change a theme. Here we have a problem with lost content and compatibility with this theme.

## Here is simple solution:

If you use Chameleon platform, you will be able to change design theme skin, and during the child theme, you will be able to change a different part of theme based on specific client requests.

## Problems which we see:

Problems which occur with the child themes, because a lot of themes are developed on some custom platform. Here is a problem if we want something to change or develop because some parts of the theme are totally untouchable.

Here is simple solution:

During the child theme you will get a copy of Chameleon theme which supports all standards and allows great flexibility to alter any part of the theme, and with each update your theme core stays compatible.

Problems which we see:

If you develop premium themes and placing them on market or own site, you can have problems such as the different structure of development. Here become a problem when you wish to update themes so they follow WP core. Here is the problem if you have a lot of a number of themes, because in this case you must re-develop in order to be compatible with the new version of WP.

Here is simple solution:

With Chameleon theme you will give your developer possibilities to fast development of new theme as well as easy updating and maintenance that are being done in Chameleon framework. Here we speak about simply framework with all documentation. This gives a possibility for a new developer to the done job so quick.

## Who can use the Chameleon Theme?

The Chameleon Theme is intended primarily for users who want to build the best possible solution for their clients. This is possible because of developers, designers and support team will participate in the development of the Chameleon Platform. There will be a large number of solution which will be provided by the Chameleon community and with the support of this community will be able to meet every client's requirements.

So, if you think why the Chameleon Platform is good for me, there is answer:

***If you are a developer*** - The Chameleon Platform give you start a theme, so you do not have to develop a theme every time. Also, during the child theme you have a opportunity to develop themes that you can offer to your clients or sell them on market.

***If you are a UI/UX designer*** - With Chameleon Platform you will able to simply integrate your solutions and sell them on market. Also, you will have a possibility to create widgets, with Chameleon Platform, which you can integrate into it or sell on the market.

***If you are support*** - Many things depend on you. If you see yourself as part of this team, you love working with customers, join us.

## Our team

### ***Goran Petrović - Full Stack WordPress Developer***

Behind me is with fifteen years of experience in developing. During my career I worked on various projects. Following the needs of the clients I worked with, I came up with the idea to create a Chameleon Platform that will ease every job, and provide the client and the end-user with a well-done job.

Also, I'm a big lover in the crypto currency, with a glimpse of the bright future.

### ***Damjana Bursać - Support***

With a long period working with a client, I can listen to your needs, so I'm here to answer any your question about our project. Also, I'm working on the preparation of documentation, in order to provide simpler use to the end-user of the Chameleon Platform.

*If you recognize yourself in this, become part of our team!*

*We are waiting for you!*

Subscribe -- Keep up with the development of the project. Join the Chameleon community, where we will be with the help of a bbPress and BuddyPress, achieve better communication, and at the same time get to know better their mode of operation.

*This site is based on the Chameleon theme for the reason that we learn how the theme "breathes" and that we can specifically speak about it in the community.*
